Earth Science field investigation — Weathering evidence (SCHO-255)

Earth Science 8 · 20 points

Learning goal

distinguish physical and chemical weathering using evidence

Your task

1. Observe two safe examples around your home or school without collecting samples.
2. Write a 200–300 word claim-evidence-reasoning explanation identifying each weathering process, two observations, and one alternative explanation.
3. Include a labelled sketch or photo only if you have permission; do not include people or location details.
4. Finish with one question for peer discussion.

Success criteria

accurate science (8 points), specific evidence and reasoning (8 points), clear communication (4 points)

Accurate science: Correctly distinguishes physical and chemical weathering and uses accurate Earth science concepts and vocabulary. (Accurate: 8; Mostly accurate: 4; Needs revision: 0)

Evidence and reasoning: Supports claims about weathering with specific observations and explains the reasoning behind each claim. (Convincing: 8; Developing: 4; Needs evidence: 0)

Clear communication: Presents the explanation in an organized, understandable way with appropriate detail and a peer discussion question. (Clear: 4; Developing: 2; Needs revision: 0)
